

AI-powered MCQ Generation

Vishnu Prasad C P

Roll No: 60

Reg.No: KTE23MCA-2060

Guided By: Dr. John C John

Department of Computer Applications

Rajiv Gandhi Institute Of Technology, Kottayam

30 July 2024

Introduction

- Provide a free educational tool that enhances study experiences for students preparing for entrance exams.
- Designed to facilitate the creation and practice of (MCQs).
- Question setters can easily add questions including options and answers, or let AI generate them.
- It includes a feature for test takers to create personalized question banks.

Scope of the project

- Automation of MCQs, options and solutions generation using NLP, providing a valuable tool for both question setters and test takers.
- Allows test takers to solve MCQs, track their progress, and report errors.
- Moderators can correct questions and the options and add them to the global pool.
- The application also have the ability to categorize questions by subject.
- Allows test takers to generate personalized MCQs from their study materials and add these questions to their local pool.

Relevance of the project

- Free resource for students preparing for entrance exams.
- Provides AI-driven generation of MCQ options and solutions.
- Moderators are responsible for ensuring the authenticity and accuracy of questions and answers.
- The automated categorization of questions by subject.
- PDF content extraction and generate personalized MCQs.

Requirement Analysis

Existing System:

- Manual MCQ Creation.
- Manual Subject Categorization.
- No PDF Integration.
- Traditional Methods.

Proposed System:

- Automatically/Manually.
- Automatic Subject Categorization.
- PDF to MCQ Conversion.
- NLP techniques.

Requirement Analysis (cont'd)

Software Requirements:

- Python Flask for the backend.
- HTML, CSS, and Bootstrap for frontend.
- NLTK, spaCY, Transformers, PyPDF2
- MySQL for database management.
- Development in PyCharm.
- Version control with GitHub.

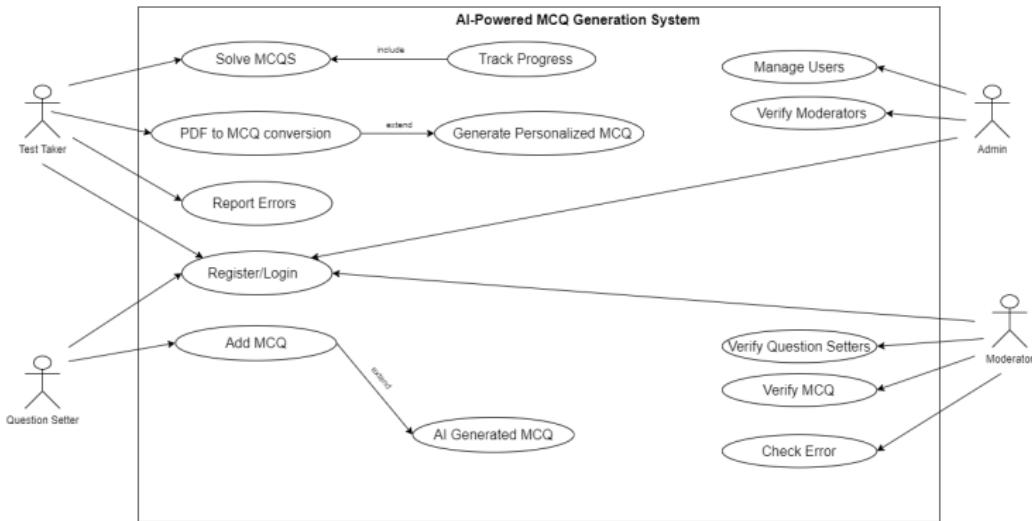

Hardware Requirements:

- High-performance PCs or laptops.
- At least 8GB of RAM.
- Multi-core processors.
- Sufficient storage.

Development Methodology

- This project follows agile methodology
- Authentications:
 - Moderator registration and login.
 - Question Setter registration and login.
 - Test takers registration and login.
- Application-specific:
 - Question setters can log in, and add MCQ questions including options and answers.
 - The same thing can be done by the AI models.
 - Moderators can log in, verify questions, options, and answers, and add them to the global pool.
 - Test takers can log in, solve MCQ questions, view solutions, and scores, and track progress. Additionally, they can input text in various formats including PDF to generate questions with the help of AI models and add these questions to their local pool.

Project progress

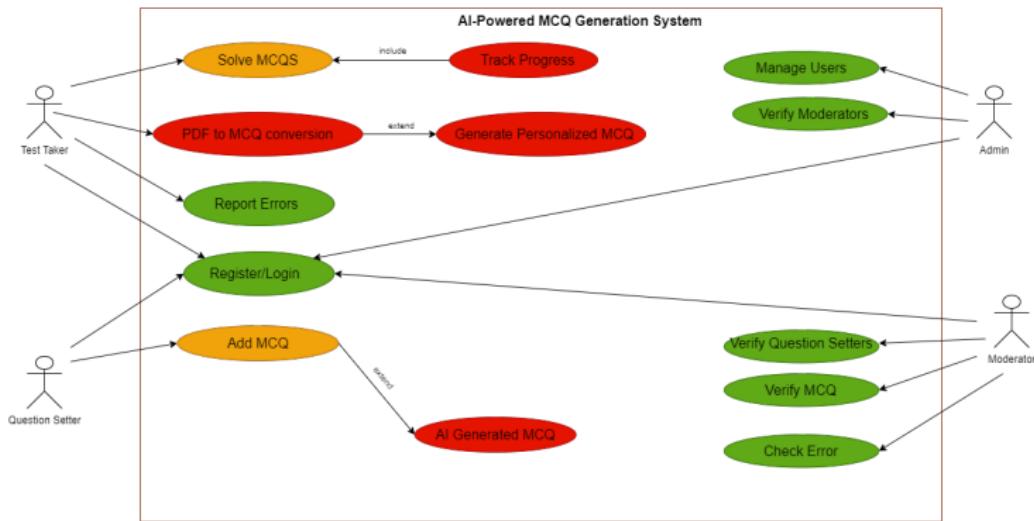

Current Status

Tasks	Status
Database design and Connection	completed.
Authentication	Authentication for Admin, Moderator, Question Setter and Test Taker has completed.
Admin Module	Dashboard. Features like Verify Moderators and Manage all users are completed.
Moderator Module	Dashboard Created. Features like Verify question setters and Verify questions are added.
Question Setter Module	Dashboard Created. Features of manually adding MCQ has completed.
Test Taker Module	Dashboard Created.

Results

Tasks	Percentage
Register/Login	90%
Manage Users	100%
Verify Moderators and Question Setters	100%
Add MCQ	50%
Verify MCQ	50%
View MCQ	50%
Report Errors	30%
Solve MCQ	20%
Total	61.25%

Work Progress

Pending Works

- Automating MCQs options and solution generation.
- Solving MCQ and Tracking Progress.
- PDF content extraction and generate personalized MCQs.

Project Plan

Task	Status	Remarks
Analysing Problem	Completed	
Diagrams design	Completed	
Database and forms design	Completed	
Coding	In Progress	started by 05/08/2024
40 percentage of Project completion	Completed	
60 percentage of Project completion	Completed	
AI part	Yet to start	Planning to complete by 03/10/2024
100 percentage of Project completion	Yet to start	Planning to complete by 23/10/2024

Conclusion

- Offers students a personalized and dynamic study resource.
- Demonstrates AI's potential in education, benefiting various subjects and educational levels.
- Future plans include integrating an advanced image-to-text translation feature.
